VOLTAGE AND CURRENT MODE OPERATION  
 REFERENCE SOURCE FOR ALL APPLICATIONS

### VERY FAST RISE AND FALL TIME

Due to the very fast slew rate of  $>52\text{V}/\mu\text{s}$  the APS is fully compliant according to the requirements of IEC/EN 61000-4-11 in practice.

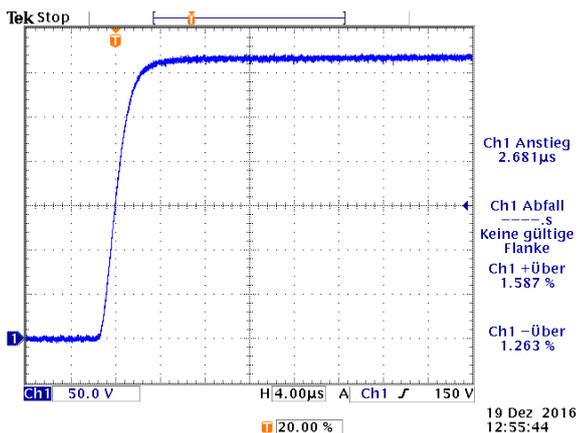

Fig. 2: rise time of the output voltage

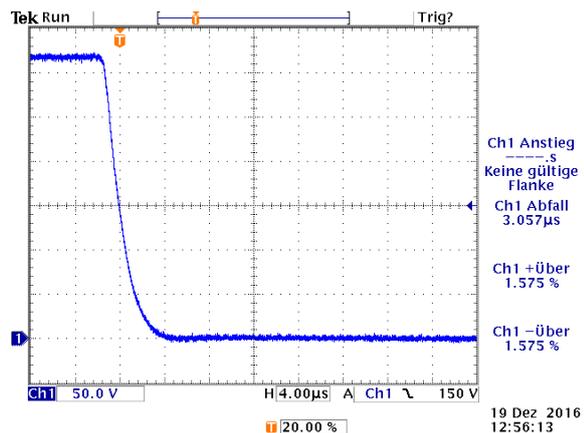

Fig. 3: fall time of the output voltage

### EXTREMELY HIGH LOADABILITY

150% of rating is available in the case of a real load. Amplifier stability is absolutely assured when operating with either inductive or capacitive loads.

The sink mode power capability is approx. 30% of the source mode capability.

### DC SIMULATION

DC signals can easily be generated using the directly coupled ironless amplifier output stage.

All test devices requiring a DC content within their input current can be supplied without problems.
